c)

1. Inhalt der Grundfläche

 $G = \pi \cdot r^2$

 $G = \pi \cdot 8^2$

G ≈ 201,06

2. Volumen des Zylinders

 $V = G \cdot h_k$

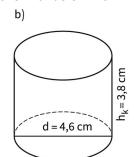

V ≈ 201,06 · 20

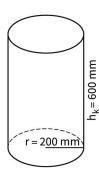

V ≈ 4021,2

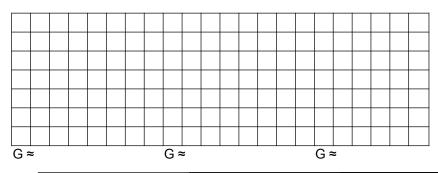

Das Volumen beträgt ungefähr 4021,2 cm³.

1 Berechne das Volumen des Zylinders. Berechne dafür zunächst den Inhalt der Grundfläche. Runde sinnvoll.

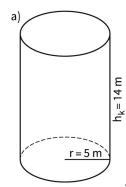

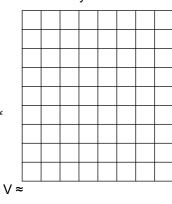

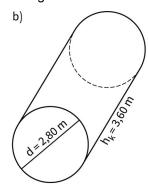

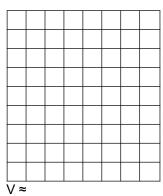

V≈ V≈

2 Berechne das Volumen des Zylinders. Runde dein Ergebnis auf zwei Stellen nach dem Komma.

∨ ≈
